

Water Quality Monitoring

An Advanced Solution and Service

Eureka Environmental provides a turn-key, web-based monitoring solutions and service that can be up and running within minutes - regardless of the application, allowing access to data anytime, anywhere. It requires no technical skills and can operate anywhere in the world under any conditions.

Water quality monitoring is a complex and multi-dimensional process that requires data fusion and analysis of many different types of parameters simultaneously. *Eureka Environmental* combines a sophisticated remote monitoring platform with its *Manta* water quality multiprobes for data analyses of various types of sensors in order to detect and monitor sources that contribute to the pollution of water. This remote monitoring platform also allows other third-party sensors (*e.g. water, weather, soil*) to be part of the same monitoring system.

Eureka Environmental also offers its web-based remote monitoring solution as a service. The client does not need to maintain servers or to set up networks. Eureka is a *one stop shop* for turn-key remote water quality monitoring solutions.

Turn-key solution

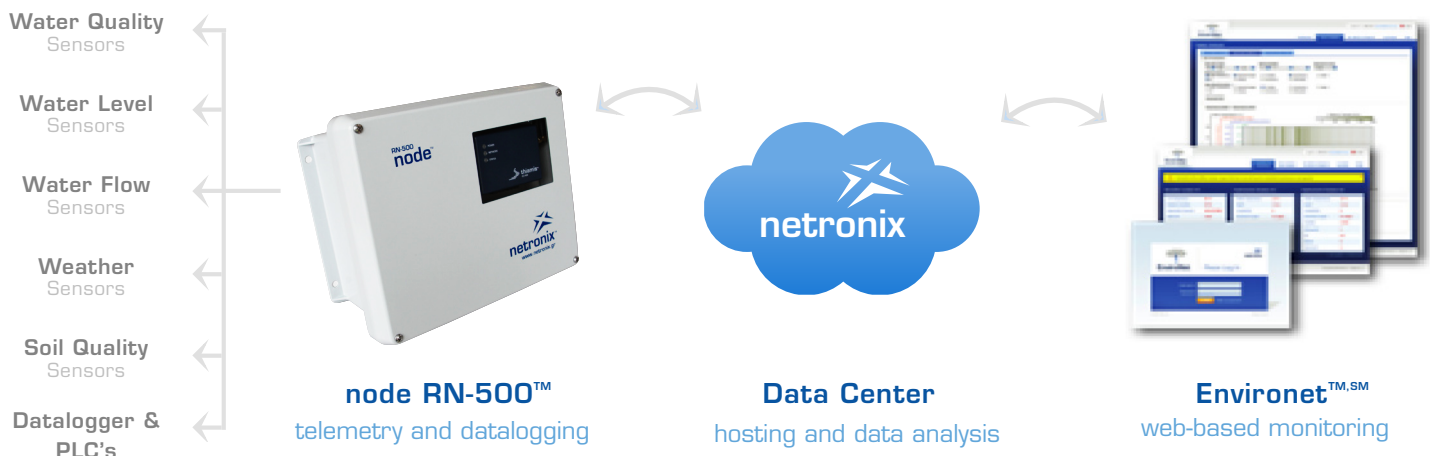

Web-based monitoring

Easy Access to data

Smart Alerts

Secure Monitoring

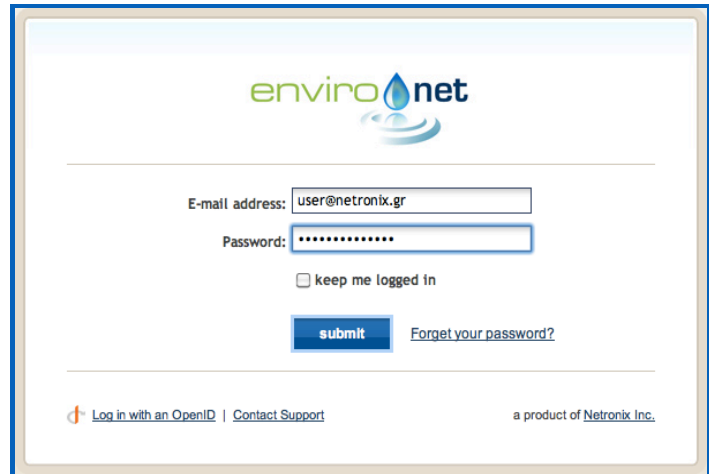

Scalable Architecture

Environet™,SM

Eureka Environmental provides its customers with Environet to meet all of their remote monitoring needs. Environet, the most advanced but also the easiest monitoring system on the market, is a fully-hosted web-based solution that allows, in a secure way, access to data and analysis tools anytime, anywhere. As a result, the customer does not need to install software or use a specific computer to access the data.

Environet can be accessed via any web-enabled device such as a PC, smart phone, or PDA.

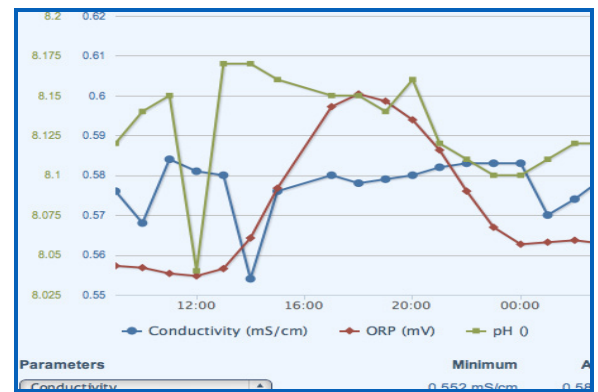

Bryant Creek			Aspen Creek		
Temperature 2	5.58 °C	-0.3	Temperature		
Conductivity	0.241 mS/cm	—	Temperature		
DO	11.41 mg/L	+0.1	Conductivity		
pH	8.02	—	DO		
ORP	354.8 mV	+2.1	pH		
Depth	0.85 m	—	ORP		

Data Representation

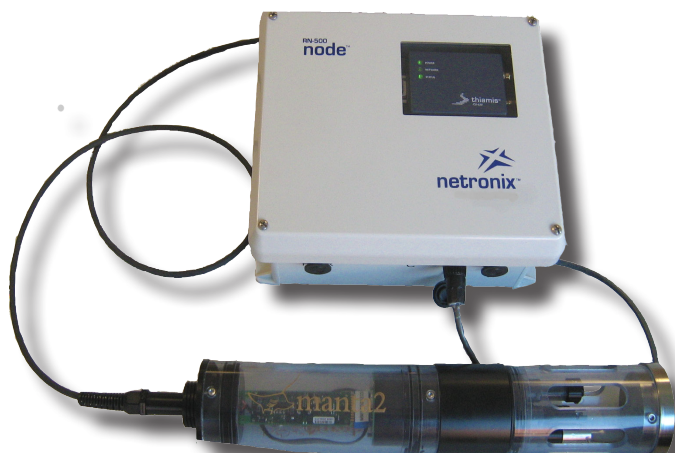

Intuitive ways to represent data by utilizing the most advanced tools in web development technology

Graphing Utility

Sophisticated graphing system for easy and quick analysis of data
